WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

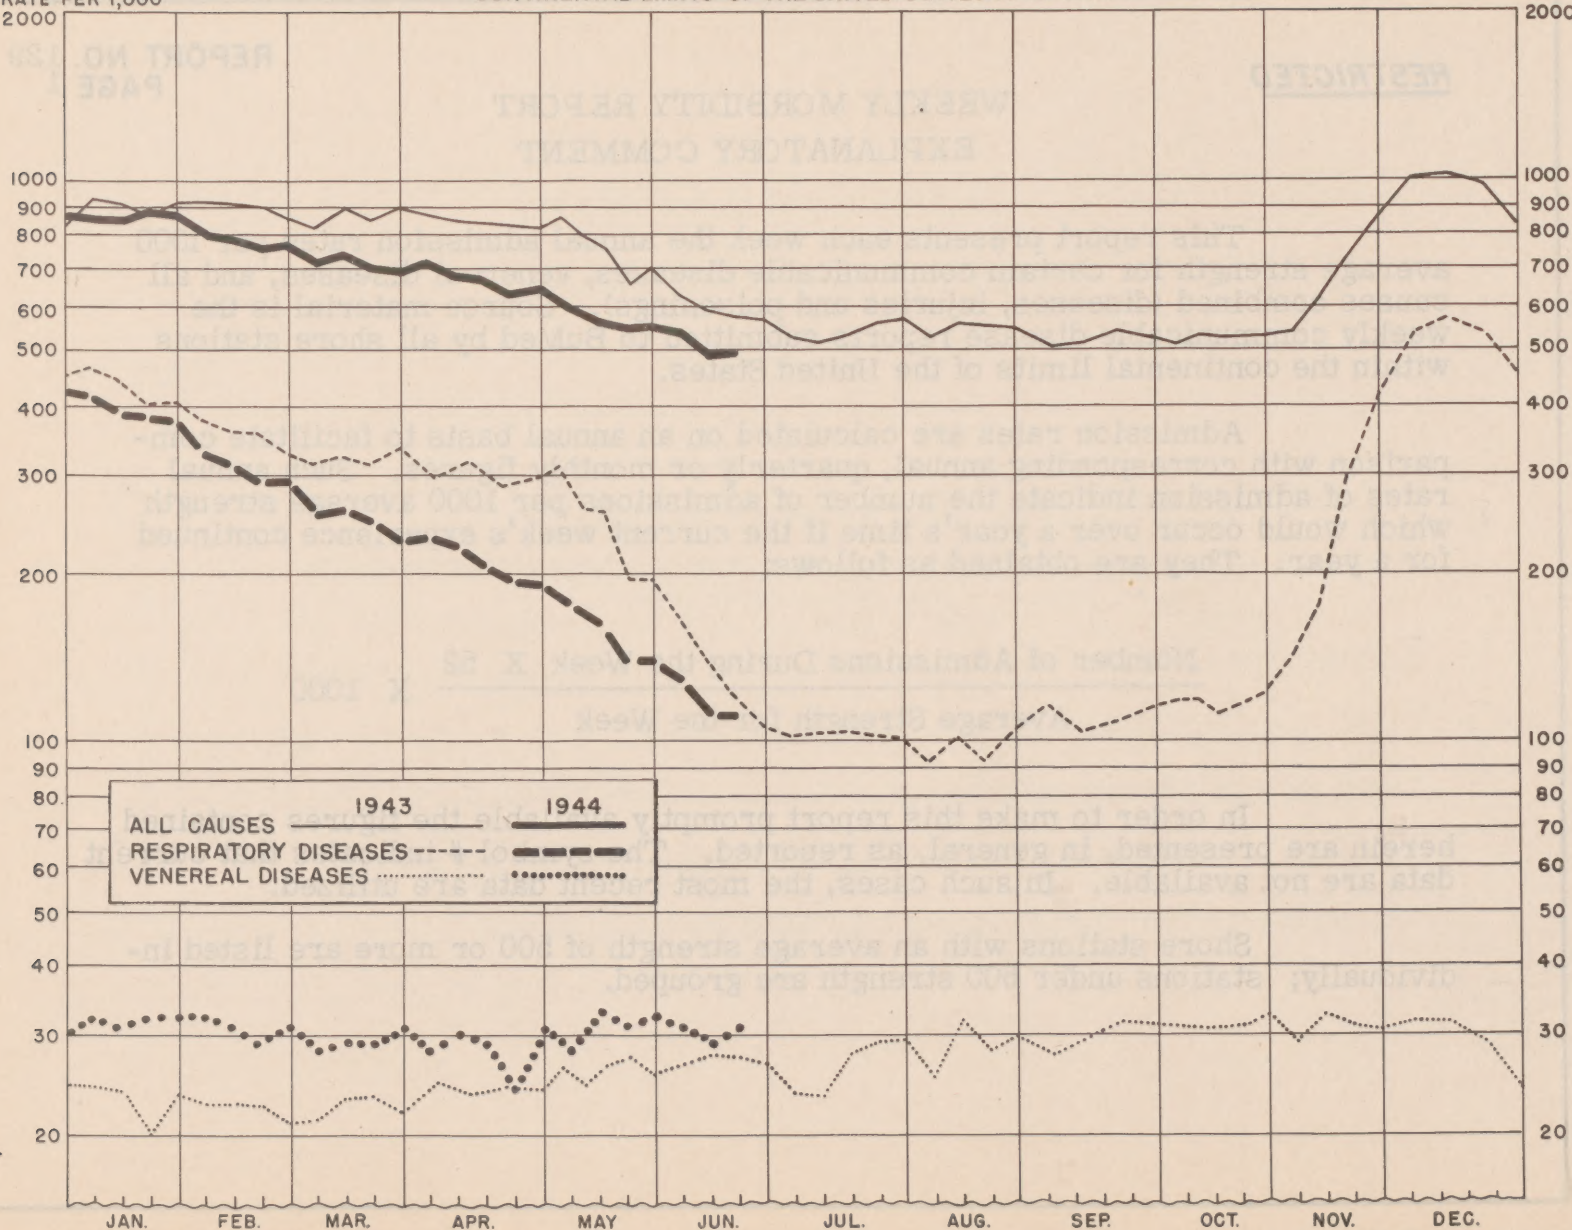

RESTRICTED

* INC. UDE: CATARRHAL FEVER, ACUTE; INFLUENZA;
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

CURRENT TRENDS

Week Ending 17 Jun 1944

The admission rate for All Causes rose slightly last week. The highest rate (792) was reported for the Potomac and Severn River Commands, the lowest rate (383) for the 8th District.

The respiratory disease curve fell slightly. A downward trend in the curve for these diseases has been observed since the week ending Dec. 11, 1943. The curve turned slightly upward in seven Districts and the Potomac and Severn River Commands. The highest rate (191) was reported for the 13th District, the lowest (65) for the 6th District.

The curve for the venereal diseases, after a fall in the previous week, turned upward to 31 again this week. The highest rate (41) was reported for the 12th District, the lowest rate (20) by the 4th District.

Influenza and Catarrhal Fever. The rate for these infections was slightly less than the rate for the previous week, continuing the downward trend which started the week ending Dec. 18, 1943. The 1944 curve has stood consistently below the 1943 curve through the first 25 weeks of the year and it now stands at a point lower than that recorded for any week of 1942 or 1943. The highest rate (123) was reported for the 13th District, the lowest (43) for the 6th District.

Pneumonia--Broncho and Lobar. The rate for these infections was 2, an increase over the rate for the previous week. The highest rate (7) was reported for the 13th District. The 4th and 6th Districts and the Potomac and Severn River Commands reported no cases.

Pneumonia, Atypical. For the fifth consecutive week the atypical pneumonia rate stands at 2. The 1944 curve continues to stand above the 1943 curve for the corresponding period. The highest rate (10) was reported for the 11th District. The 1st, 4th, and 12th Districts reported no cases.

Tonsillitis and Pharyngitis, Acute. The rate for these infections this week continued

CURRENT TRENDS--CONTD.

the downward trend apparent since the week ending Feb. 5, 1944. The Potomac and Severn River Commands reported the highest rate (94), the 7th District the lowest rate (14).

Rheumatic Fever, Acute. The acute rheumatic fever rate was 2 this week as compared with 3, the rate for the corresponding week of 1943. The 13th District reported the highest rate (13). The 4th and 6th Districts reported no cases.

Scarlet Fever. The scarlet fever rate was reported again at 3. The rate for the corresponding week of 1943 was 3.9. The trend has been generally downward since the week ending Jan. 22. The curve turned upward slightly in the 1st, 4th, 5th, 8th, 12th, and 13th Districts, and the Potomac and Severn River Commands. The highest rate (32) was reported for the 13th District. The 6th and 7th Districts reported no cases.

Cerebrospinal Fever, Meningococcic. After a drop in the two previous weeks the curve for this infection rose this week to 0.31. The rate for the corresponding week of 1943 was 0.60. The trend has been generally downward since the week ending Jan. 8. The 4th, 7th, and 9th Districts and the Potomac and Severn River Commands report no cases.

Malaria. The malaria rate continued for another week at 2. The rates for the corresponding weeks of 1942 and 1943 were 0.1 and 2.8 respectively. The highest rate (5) was reported for the 11th District; the lowest rate (0.6) for the 8th District.

Measles. The rate for measles continued another week at 3. The rate for the corresponding week of 1943 was 2.5 and for the corresponding week of 1942, 4.5. The 13th District reported the highest rate (8). The 6th and 12th Districts reported no cases.
